

I am

Doctor/Helper

I'm trying to

→
help passengers in
trains during
emergency
situations

But

No Services are
available to passengers
when they are in
emergency situation

It is difficult to ask for
immediate help in train
and no one is there to
take first aid in case of
Emergency

Because

No enhancement of
Railway technologies
as like in other
modes of transport

There is no
technology or manual
helpers in trains in
case of emergency

Which makes me feel

There is no application
that provides a proper
communication between
the affected people and
the doctor/helper

Need of a technology (like
IOT) to inform about the
person who needs First
aid
